

## AGS

# Association of Geotechnical & Geoenvironmental Specialists

The 130 Members of the AGS are: consultants, contractors and laboratories engaged in the assessment, analysis and remediation of contaminated land and/or ground engineering. All Members are required to adhere to the AGS Code of Practice for Site Investigation.

The AGS has seven active working groups, including those concerned with contaminated land, safety, laboratories, the electronic transfer of ground-investigation data, business practice and loss prevention.

### MISSION

To provide a focus for the promotion of good commercial and professional practice in the Geotechnical and Geoenvironmental industry.

- promote quality;
- provide good-practice guidance;
- support Members through seminars, conferences and a legal 'hotline';
- improve the profile of geotechnical and geoenvironmental professionals.

In furtherance of these objectives, meetings and seminars are held and a series of publications have been issued. Newsletters are distributed to key individuals within organisations across all sectors of the industry to present informed articles and commentaries on topical issues or events and to publicise the work of the AGS.

The AGS website provides a searchable database of Members to assist the selection of appropriately qualified and experienced consultants, contractors and laboratories. A downloadable copy of the AGS Format for the electronic exchange of ground-investigation data, position papers and guidance notes can also be found there.
